About the DataMan Control Box

The DataMan Control Box provides additional functionalities when connected to a DataMan 50 or 60.

The DataMan Control Box has two buttons and a buzzer. The buttons are connected to Input lines 0 and 1 on the DataMan 50 and 60. The buzzer is connected on the Output 0 line.

Input Line Options

Input Line 0 is hardwired to Trigger On. You can decide what you connect Input Line 1 (the TUNE button) to, by checking a functionality on the System Settings pane’s Inputs tab’s Input line 1.

To use the buttons on the Control Box, change the default Manual trigger mode on the Light and Imager Settings pane to any trigger mode other than Manual and Presentation. Press the TUNE button and then the TRIG button in order for the functionality connected to the TUNE button to work.

The default buzzer duration is 5 ms. On the System Settings pane’s Outputs tab, you can set it to maximum 10000 ms.

For demonstration purposes, the recommended settings for DataMan 50 or 60 Input 1 options are Train Code and Optimize Brightness checked (others unchecked), Pulse Width 50 ms.
Limitations

The following limitations apply when the Control Box is connected to a DataMan 50 or a DataMan 60.

- Output-0 and Output-1 can only be used in sink mode (low side switch). Output-Common is connected to GND inside the Control Box. For reference, see the following image, which shows the pinout of the I/O cable on the DataMan 50 and 60.

</table>

- Load connected to Output-0 is limited. The maximum current for 5V supply voltage is 20mA, for 24V it is 1mA. The maximum load current for Output 0 can be calculated by $l_{load\_max} = 25mA - (V_{supply} / 1\ k\Omega)$
- Output-Strobe can only be used in TTL mode, not in Open collector mode. The maximum load current at Output-Strobe is reduced by 4mA.
For European Community Users

This product has required the extraction and use of natural resources for its production. It may contain hazardous substances that could impact health and the environment, if not properly disposed.

In order to avoid the dissemination of those substances in our environment and to diminish the pressure on the natural resources, we encourage you to use the appropriate take-back systems for product disposal. Those systems will reuse or recycle most of the materials of the product you are disposing in a sound way.

The crossed out wheeled bin symbol informs you that the product should not be disposed of along with municipal waste and invites you to use the appropriate separate take-back systems for product disposal.

You may also contact your supplier for more information on the environmental performance of this product.

The DataMan Control Box meets or exceeds the requirements of all applicable standards organizations for safe operation. However, as with any electrical equipment, the best way to ensure safe operation is to operate them according to the agency guidelines that follow. Please read these guidelines carefully before using your device.

**FCC Class A Compliance Statement**

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference, in which case the user will be required to correct the interference at personal expense.

**Canadian Compliance**

This Class A digital apparatus complies with Canadian ICES-003.

Cet appareil numérique de la classe A est conforme à la norme NMB-003 du Canada.

**C-Tick Statement**

Conforms to AS/NZS CISPR 22/ EN 55022 for Class A Equipment.

**European Compliance**

The CE mark on the product indicates that the system has been tested to and conforms to the provisions noted within the 2004/108/EEC Electromagnetic Compatibility Directive.
